Sichuan Changyi Oil-Gas Gathering Transportation Equipment Co.,Ltd

APPLICATION ON SITE

Sichuan Changyi Oil-Gas Gathering Transportation Equipment Co., Ltd

PERFORMANCE

+ THROTTLE GLOBE VENTING VALVE (hereinafter written as TGV Valve) is applied for

venting gas in natural gas pipeline when an emergency or overhauling is needed.

- + TWENTY YEARS OF TGV Valve in the market
- + FIFTH GENERATION is haloed by customers to meet different working conditions after

improvements of many times.

+ MUTIPLE FUNCTIONS of 5th generation

In the combinational function of throttle & globe & vent

With realization of forward and reverse media flow

Removing impurities automatically

Be suitable to high and low temperature, sour gas, and high sulfur gas

Scour-resistant and erosion-resistant in the condition of high pressure difference

Sichuan Changyi Oil-Gas Gathering Transportation Equipment Co., Ltd

With anti-sulfur alloy, ceramic seal / With media containing high H2S、CO2 and CL-.

DESING FEATURES

+ **Reliable Seal**: hard and soft seal, meeting the *zero leakage* of high-pressure gas and liquid media

+**Pressure Throttle and Pressure Relief:** Two-class pressure alleviation slows down the medium erosion on the sealing surface and improves the sealing reliability.

+ Forward and Reverse Medium:

The movement of Media is transferred from the throttling point in the valve bush to the

interface between relief shaft and valve bush. The soft seat sealing is prevented from

dragging and delinking easily.

+Small vibration and low noise

+Auto Cleaner: The two O-rings in valve seat along with residue slot make residues cleaned automatically when spool moves up and down in the valve seat.

+ Reliable and flexible operation: Multiple usages of the balance hole and residue slot.

+ **No leakage and long life time of Valve stem**: multiple functions of the O-ring and the packing material PTFE.

PN	1.6 ~ 42.0MPa (ANSI 150Class ~ 2500Class)
DN	15~500mm (NPS 1/2"~20")
Applicable	Conventional : -29℃ ~ 130℃ ; high : 130℃ ~ 350℃ ; low : -101℃ ~ -29℃.
Temperature	(Specific PN and DN is to be chosen by real situations)
Medium	Oil, Purified NG, NG(H2S+CO2≤8mol%), NG(H2S+CO2≤21mol%), Gas, etc.
Type of Drive	Manual 、Electrical 、Bevel Geared
